

2019 Harvest : High Quality Hemp Flower & Clones

CHERRY X OTTO II : SWEETENED

The Sweetened phenotype is a cross between Cherry and Otto II, resulting in a blend of characteristics of both genetics. The expression of the phenotype is a vigorous growing plant with short internodes, resulting in a fast- growing stocky plant. Another component of its phenotype is the terpene profile. This plant shows high tests in the terpenes Caryophyllene, Humulene, Guaiol and alpha-Bisabolo. The flower at maturity is sweetly aromatic with notes of cedar, citrus and pepper.

Average CBD-A: 10% - 14+% Average THC: 0.03%
Ratio CBD/THC: 27.36:1
Maturity Week: 7
